

SOLAR ELECTRIC PROS

WHAT'S IN A WARRANTY?

There are hundreds of companies with warranties but what the difference and what is the best? We feel the best warranty is one you can clearly understand with no misleading contracts. We believe in setting realistic straight forward expectations to our customers that we can stand behind.

We treat our customers like family and do not trip them up with fine print or charge them up front for future warranty work that they might not ever need.

Warranty

- Solar panels with 25 year manufacture warranty
- Top of Line Inverters with 12yr standard Warranty, extendable to 25 years
- 25 year warranty: roof leaks due to racking and roof penetrations
- 25 year warranty: craftsmanship, wires & cables, and concrete
- Free Remote System Monitoring for life of inverter
- One Free System Maintenance and Inspection appointment
- Professionally trained and certified Solar Installers

In the event of a system component failure while covered under manufacture warranty we will perform the labor required to remove and replace the damaged item and charge customer our regular hourly rate per man hour. Any additional materials will be provided by Solar Electric Pros or manufacture. Warranty terms and conditions are included with our solar contract for your review.

You can get more information about us at www.solarelectricpros.com.

Some big Company's offer 25 year worry free warranties with fine print like this...

Except to the extent such failure or malfunction is covered by the PV System component manufacturers' warranty. * i.e. solar panels or inverters fail, the twenty five year warranty does not apply to the equipment or labor to replace. The 25 year warranty only applies to workmanship, diagnostics, repair, electrical pipe, wiring, and roof leaks caused by racking. The manufactures warranty covers the equipment. Most solar panels have 25 year warranties, but the inverters typically only have 10-13 year warranties depending on the manufactures. This means that the inverter is not covered in some cases for the last 13 years. Manufactures realize that the typical life span of a solar inverter is 10-13 years. Warranties that cover beyond this are almost always extended warranties. In the case of replacing a warranty item the labor is not included and hidden in fine print.*
